Microsoft Office: Excel-When I open up my spreadsheet in Excel and try to print it out, why don't the lines around each cell print out?

Highlight the data that was entered in. Then goto "Format", then "Cells..." (or Ctrl-1) A window will pop up, choose the tab labeled "Border", in there you will see three buttons under "Presets", click the "Outside" and "Inside" button. Then your data will have lines around it when it is printed out.
